

Apex Log Layout

Cover the base with chippings provided making sure not to block the burner outlets and keeping an area around the pilot clear to help when lighting the fire.

Now Place each piece as per the pictures some adjust will be needed to ensure the flame go in between the pieces and not placed directly above the flames as this will create carbon deposits.

Remember some adjustment will be needed to ensure the flames go in between and around the pieces and not placed directly above the flames as this will create carbon deposits.
